## RESEARCH INTERESTS

---

My research aims to improve software quality by detecting and addressing quality-related bugs, particularly those that arise from long-term maintenance efforts. I develop tools and techniques to gain a deeper understanding of complex, system-wide quality issues, including security, reliability, and maintainability through code static analysis, and AI-driven approaches. Additionally, my research incorporates effective empirical methodologies to identify the root causes of software quality issues. By combining technical depth with empirical research, I contribute to the development of more reliable and robust software systems.

**Keyword:** Software Engineering, Software Maintenance & Evolution, Software Requirements, Software Security, Software Reliability, SE4AI, AI4SE, Program Analysis, Program Synthesis, Code Quality, AI Code Generation.
